Internal Information

PLP WIRESHARK DISSECTOR UPDATE

INSTALLATION

To enable the updated dissector, install the provided files into your personal Wireshark configuration folder:

- **Copy the files:** Place both dissector folders (**plugins/** and **plp/**) into the path shown below for your OS.
- **Restart Wireshark:** The new parser and its updated fields are detected automatically on startup.

```
Windows
-------
%APPDATA%\Wireshark\
   |-- plugins/
            |-- init.lua
   |-- plp/
         |-- plp.lua
         |-- PLP_ANALOG.lua
         |-- ...
         |-- PLP_STATUS_PROBE.lua
```

Example path: C:\Users\msalamo\AppData\Roaming

```
Linux
-------
~/.config/wireshark/
   |-- plugins/
            |-- init.lua
   |-- plp/
         |-- plp.lua
         |-- PLP_ANALOG.lua
         |-- ...
         |-- PLP_STATUS_PROBE.lua
```

Internal Information

PLP WIRESHARK DISSECTOR

FRAME TIMESTAMP

The **Wireshark PLP dissector** exposes a **Timestamp** value for every frame, marking the moment the **MIPI Start of Frame** was received.

Internal Information

PLP WIRESHARK DISSECTOR

FRAME TIMESTAMP – FILTER BY START OF SEGMENT

To inspect per-frame timestamps, apply the filter **plp.probeflags.sos == True**. This isolates the first packet of each frame, so the **Timestamp** column gives one row per frame.
